

Forestry

Treatment of the trial beginning
February 2013

Back ground information

- Trial application beginning February 2013
- Trial area 2000qm
- Fire of the forestry was about 3000 ha
- 70 kilometers south of Barcelona Spain
- Target
 - Stop erosion after fire
 - Therefore accelerate growth of any plants
 - Improve speed of growth after natural replanting of the pines and shrubs.

1th trail plot forestry

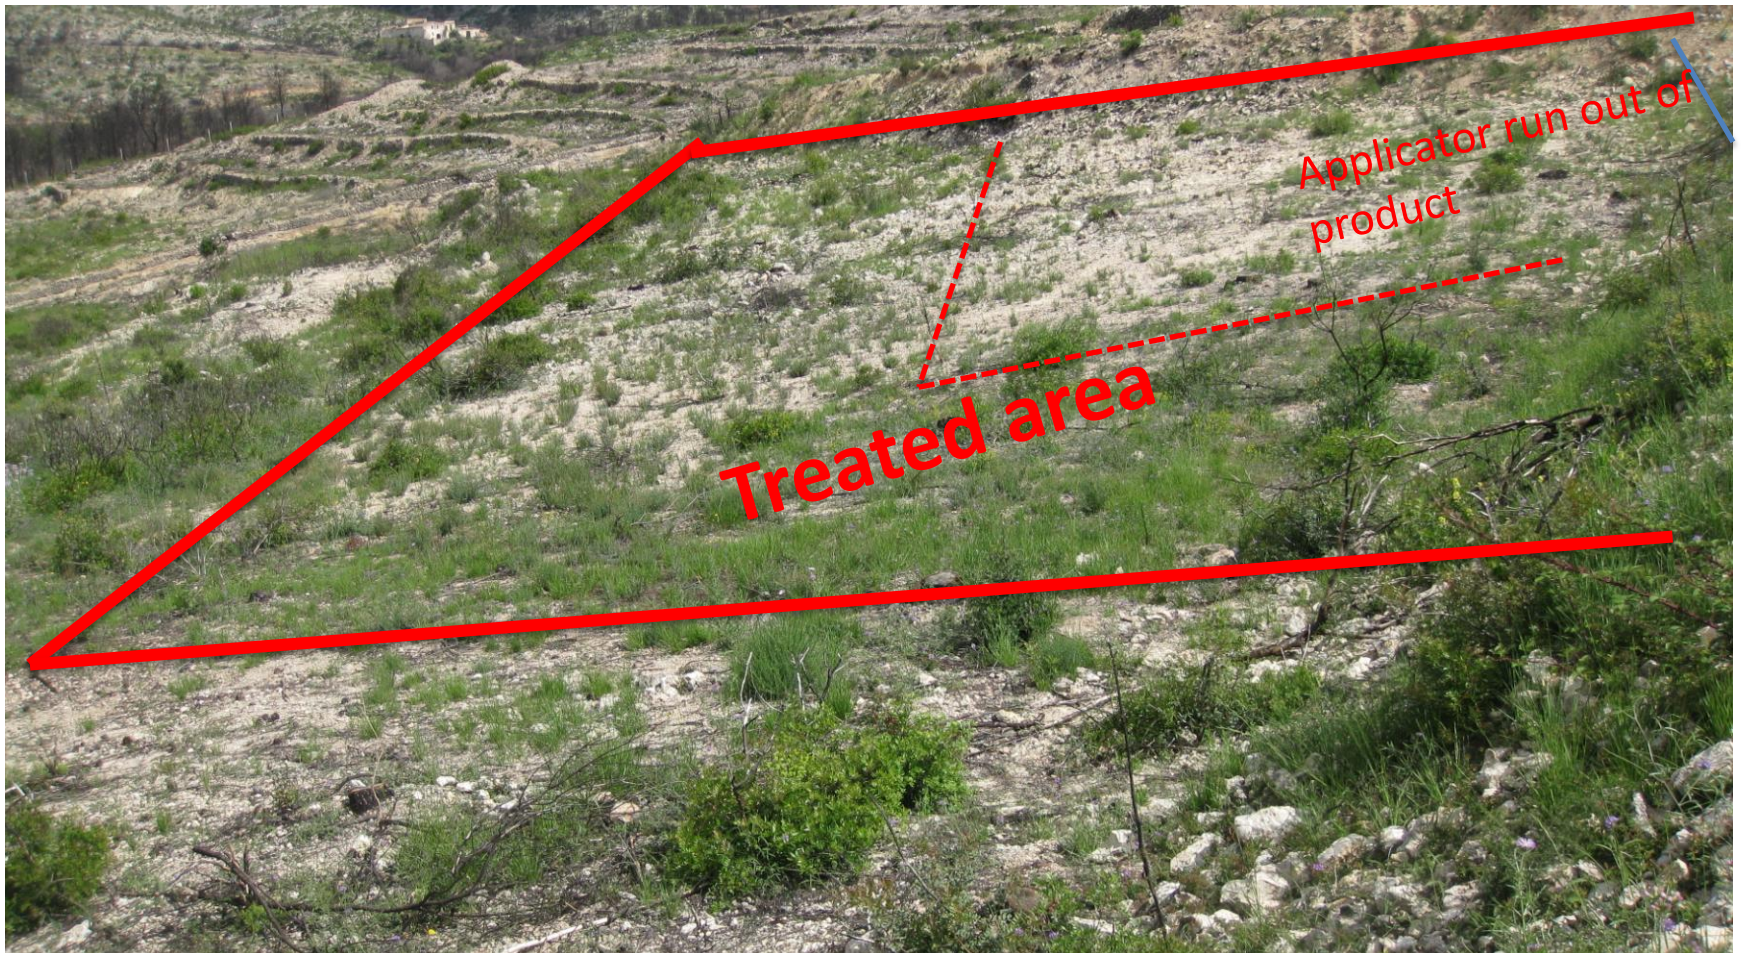

First view after application: Slightly positive effects, but not sufficient to conclude in a positive or negative direction. Trial will be review in September after grass has tried out.

1 Trail plot forest

Left to right: Jaume Banchs (Futerrí), 3 members of the Municipality of Barcelona forestry department.

2nd trail plott (200qm)

Slightly better results observed, but also reviewed in September.
Interesting effect where the applicator run out of product (right above).
