LOW TECH ~ HIGH PERFORMANCE

Author – Don D. Haller

Contrary to the common belief that natural/organic farming methods are more expensive, there exists a cost effective Natural/Organic method of growing bigger, better and healthier food crops; a method that does not overuse harsh synthetic chemical fertilizers, pesticides and fungicides, all of which pollute our air, water and soils. Worldwide, countries, farmers and growers are discovering that by reducing their chemical inputs and by increasing their usage of natural occurring nutrients and organic materials, their crop production is higher with a higher nutrient content. And this is exactly what we have been advocating since 1996.

BELIEVE WHAT YOU WILL, but we have been working with natural/organic methods for over 20 years worldwide using these irrefutable principles of nature.

“CLEAN/GREEN” ENVIRONMENTAL TECHNOLOGIES

Every year, millions of dollars is spent and/or is donated to universities and testing facilities to develop ways of solving global environmental problems i.e., (industrial & municipal) wastewater cleanup, enhancing the quality and quantity of crop production, soil and desert reclamation, by using the same or similar chemical and toxic materials that caused the problems in the first place. However, many of these studies conclude that the results of their efforts are “inconclusive” and more money is needed for further research. Usually, their routine answer is, “Solution to the Pollution is Dilution”.

No doubt that these research studies may bring the best minds together to try to develop new concepts and technologies, which are needed, however, please do not overlook an area that could begin helping poor countries in just 60-90 days using EXISTING PROVEN PRODUCTS, TECHNOLOGIES AND METHODS OF FARMING that are readily available and have been used for thousands of years throughout the world. It is truly amazing the amount of grant money being used to find solutions for simple problems that are routinely solvable by nature’s own methods and processes!

As stated above, our products and simple procedures are available NOW, and can be implemented within 60-90 days anywhere in the world. They also can create thousands of jobs, as most require minimal training. Our highly concentrated raw materials (Synergistic Catalysts) can easily be shipped into any country, then simply diluted with WATER. Blending and bottling operations also can be set up locally for processing and convenience. When our products are used along with local natural resources of organic and inorganic materials, the costs can be defrayed by a minimum of 25% to 50%, even in the very first year.

All claims made herein can be substantiated with scientific research and testing results documented by noted agronomists, PhD's, universities and some of the finest testing facilities throughout the world. In addition, we have a substantial number of testimonials from our customers since 1996. Our Synergistic Catalysts have also been extensively field tested, and are currently being used in many countries throughout the world for numerous applications. Again, they are ideal for developing countries as they are highly concentrated and require ONLY WATER to activate. **Our Synergistic Catalysts are Non-Toxic, Non-Hazardous, 100% Natural and Environmentally Friendly.**

Some of what we do and recommend has been used by many civilizations for thousands of years. We, therefore, do not see a need for new research to justify using products and procedures that are tried and proven technologies! Please view the testing results on our websites at www.microsoil.com and <http://home.earthlink.net/~test-results2/> for visual and documented proof. This is just a small example of what we are capable of doing. Nonetheless, we are receptive to cooperative testing for any validation studies anyone might require.

From the above, it is evident that the products, concepts and growing principles we advocate do not require millions of dollars to study and validate. Mother Earth has been using these methods and materials since the beginning of time. We call this concept our "LOW TECH ~ HIGH PERFORMANCE" Clean Green Technologies, using Synergistic Catalysts.

In short, we have a very cost-effective and simple way to help everyone, from large growers to impoverished farmers, with simple food growing principles and methods. We make it possible to increase the quantity of agriculture crop yields, and enhancing the quality (nutrient enrichment) of food crops so vital for human health and welfare of people worldwide – plus the by-product of using our products and farming methods is cleaner and healthier eco-systems.

Working with Nature's Laws

Synthetic chemicals and pesticides tend to alter (accelerate or slow) nature's normal life cycles of all plant and animal life (biota) in the soils and water. These disturbances can change the life cycles in one area in an eco-system and thereby eventually change the entire environment. Just like a Swiss watch, you change the size of one wheel or cog and the entire watch quits working properly. Nature is very simple, but complicated at the same time. It has worked since the beginning of time for all life on this planet, so why do we (man) continue to try to fix something that IS NOT BROKEN?

If you feel that any of the above has merit for you, your country, corporation, foundation, group or customers, please contact us and we will be happy to assist you with your needs.
